1490. Clone N-ary TreePremium

Solved

MediumTopicsCompaniesHint

Given a root of an N-ary tree, return a deep copy (clone) of the tree.

Each node in the n-ary tree contains a val (int) and a list (List(Node)) of its children.

```
class Node {
    public int val;
    public List<Node> children;
}
```

N-ary-Tree input serialization is represented in their level order traversal, each group of children is separated by the null value (See examples).

Example 1:

```
graph TD
    1((1)) --- 3((3))
    1 --- 2((2))
    1 --- 4((4))
    3 --- 5((5))
    3 --- 6((6))
```

Input: root = [1,null,3,2,4,null,5,6]  
Output: [1,null,3,2,4,null,5,6]

Example 2:

```
graph TD
    1((1)) --- 2((2))
    1 --- 3((3))
    1 --- 4((4))
    1 --- 5((5))
    3 --- 6((6))
    3 --- 7((7))
    7 --- 11((11))
    4 --- 8((8))
    8 --- 12((12))
    5 --- 9((9))
    5 --- 10((10))
    9 --- 13((13))
    10 --- 14((14))
```

Input: root = [1,null,2,3,4,5,null,null,6,7,null,8,null,9,10,null,null,11,null,12,null,13,null,null,14]  
Output: [1,null,2,3,4,5,null,null,6,7,null,8,null,9,10,null,null,11,null,12,null,13,null,null,14]

Constraints:

- The depth of the n-ary tree is less than or equal to 1000.
- The total number of nodes is between [0, 10^4].

Follow up: Can your solution work for the graph problem?
